

Notes meeting team 19-3-2018

Present: Andrei, Tom and Marc

After the meeting with Lars, we further discussed the feedback we got from him. Regarding the main devices screen, we thought it would be best to simply show the sliders on tap on the device name. The sliders will then slide down in a similar way as they now slide down when switching the device on.

For the Server settings screen and account settings screen we reconsidered the logout buttons. We did not really made a decision about it yet, because it can be made while implementing and choose what is most easily done and we have to further look into the iOS-style of doing it. A logout button in the top right corner could be an option.

Marc will send the Architecture Document and Requirements Document to Lars.
