Meeting notes team meeting March 28, 2018

Present: Andrei, Juanjo, Zino, Tom (joined half an hour later) and Marc

We discussed the problem with front end/ back end integration regarding setting the state of a device on the server. It was not clear to Marc if the Rawstate could be used to set the state. Zino cleared up that setting the state should be done using the State of the Activator class.

We discussed the presentation and who should present. It took some time to decide that Andrei will present a General Overview, Marc the front end part and Jur the back end part.

It was also decided that we will use Google Drive Presentation for the slides. Zino created already a file during the meeting and we chose a light blue template.

We also discussed the structure of the user interface of the app and whether it should be possible to move from the server connect screen back to the login screen (we decided that it should be possible to move back, to be able to login to another account if not yet connected to a server. This was also with an eye on the future integration with firebase.)

We decided on the following task division (there are other task on the Trello board still):
· Juan and Tom will look at the sliders for the devices screen.
· Tom will update the screenshots of prototype in the architecture document.
· Tom and Andrei will fixing/finish the server screen
· Marc will make front end presentation slides and fix the switches in devices screen.
· Jur will make back end slides
· Zino will have a look if there should be something fixed in back end for the state changes.
